1. Introduction

The Superstore Sales Performance Dashboard is an interactive Business Intelligence solution developed in Microsoft Power BI. It converts raw retail sales data into meaningful visual insights that help analyze sales, profitability, product performance, and regional trends.

2. Project Overview

The dashboard provides decision-makers with a consolidated view of business performance between 2014 and 2017. Interactive visuals enable users to evaluate sales growth, profit contribution, product categories, and geographical performance.

3. Problem Statement

Retail businesses collect large amounts of transactional data. Without proper visualization, it becomes difficult to identify sales trends, profitable products, and improvement opportunities.

4. Objectives

- Analyze overall sales performance.
- Measure profit and quantity sold.
- Compare category-wise sales contribution.
- Identify profitable sub-categories.
- Analyze yearly sales trends.
- Visualize sales across states.
- Support business decision-making through interactive dashboards.

5. Tools & Technologies

- Microsoft Power BI
- Power Query
- DAX
- CSV Dataset

6. Dataset Description

Dataset: Superstore Sales Dataset

Period: 2014–2017

The dataset contains sales transactions including product category, sub-category, sales, profit, quantity, order date, state, and region.

7. Dashboard Overview

The dashboard combines KPI cards, category distribution, sales trend, geographical analysis, profit by sub-category, and interactive filters in a single report page.

8. Dashboard Components

- KPI Cards: Total Sales, Total Profit, Total Quantity
- Donut Chart: Sales Distribution by Category
- Line Chart: Sales Trend Over Time
- Map: Sales by State
- Bar Chart: Profit by Sub-Category
- Slicers: Order Year and Region
- Business Insights Panel

9. Key Performance Indicators

KPI	Value
Total Sales	2.30M
Total Profit	286.41K
Total Quantity	38K

10. Dashboard Analysis

Sales Distribution by Category

Technology contributes the largest share of total sales, followed by Furniture and Office Supplies.

Sales Trend

Sales show consistent growth after 2015, with the highest value recorded in 2017.

Sales by State

The map highlights regional sales distribution and helps identify high-performing locations.

Profit by Sub-Category

Copiers generate the highest profit, while Tables and a few other sub-categories contribute comparatively lower profitability.

Interactive Filters

Year and Region slicers allow dynamic analysis based on user selection.

11. Business Insights

- Sales increased significantly after 2015.
- Technology category generated the highest sales contribution.
- Profit growth is lower than overall sales growth.
- Certain sub-categories require improvement in profitability.
- The dashboard enables quick, data-driven decision-making.

12. Conclusion

The Superstore Sales Performance Dashboard provides an effective way to monitor business performance through interactive visualizations. It helps users evaluate sales, profit, quantity, category contribution, regional performance, and business trends, enabling informed strategic decisions.
